PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/615,764

Applicant(s)

PARRY ET AL.

Examiner

Gerald Smarth

Art Unit

2146

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3, 7-16, 25-29 and 41-53 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-3, 7-16, 25-29 and 41-53 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/S5108)
Paper No(s)/Mail Date 07/09/2003.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date ____.
- 5) ☐ Notice of Informal Patent Application.
- 6) ☐ Other: ____.

DETAILED ACTION

1. The instant application having Application No. 10/615764 has a total of claims pending in the application; there are 4 independent claims and 27 dependent claims, all of which are ready for examination by the examiner.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 7-16, 25-28, 41, 45-47, & 51-53 rejected under 35 U.S.C. 103(a) as being unpatentable over Muto(US 2002/0116480) in view of Kurz (US 2002/0075500).

Regarding claim 1, Muto teaches a method of providing email messages to a printing device, *(Muto discloses the present invention has been developed to solve the above mentioned problems, and the first object of the present invention is to provide a data transfer process apparatus, a device, a network system, a data transfer method, and a storage medium capable of having the user who manages the device recognize the status of the device*

at an appropriate timing by transmitting by electronic mail the transmission data generated according to the message for the status information about the device based on the status change of the device and the destination information; Page 1 paragraph 10) said method comprising attaching a

memory module storing said email messages to a printing device consumable.

Muto does not specifically teach method comprising attaching a memory module storing said email messages to a printing device consumable.

However Kurz does not specifically teach method comprising attaching a memory module storing said email messages to a printing device consumable.

(Kurz discloses a method for providing information to a user comprising: providing a printing machine; installing a replaceable component in the printing machine, the replaceable component including a memory storage device, the memory storage device containing data including an identification code of the replaceable component; Page 1 column 9 lines 1-6 Kurz further discloses the predetermined information allows the user to solve a problem with respect to the CRU during the life of the CRU. In addition, an electronic e-mail message may be sent to the user, to a User Interface (UI), or to a display window to supplement the printed document; Page 2 column 22 lines 13-18)

Both Muto and Kurtz are from the same field of endeavor, Printing/Toner cartridge systems.

It would be obvious to a person of ordinary skill in the art at the time of the invention to modify the Muto's data transfer system to include the replaceable

consumable printing device with memory. One of ordinary skill in the art would have been motivated to make this modification in order to have a more efficient and direct way to notify users about errors, problems, consumption and manufacturer information of printing device consumables.

A user may be informed when a marking material in a CRU is at a level too low to confidently print any further jobs. Once a user is signaled of a problem, a further problem is that, at a time of recognized need, the user may not have the necessary information readily in their possession in order to make a decision with respect to a replacement CRU. For example, the user may not possess the manufacturer's recommended CRU replacement model, the user may not know where to order the CRU, the user may not have the CRU manufacturer or vendor(s) contact information, the user may not know how to remove and recycle the CRU, or the user may not know how to install the replacement CRU. Such beneficial information is most useful when a user is notified that a CRU will soon run out of a substance or when the CRU is at or near the end of its useful life. In view of these problems, the present invention proposes a method and system which provides a user with various useful information concerning the CRU in the form of a printed document. The method and system makes the CRU information available to the user at the source of the problem, and at an identified time of need in the printing machine. The information is provided in one convenient place, in the form of a printed document; Kurtz Page 1 Paragraph 3 & 4.

Therefore, it would be obvious to combine Muto and Kurz to arrive to the limitations of claim 1.

Regarding claim 2, Muto in view of Kurz taught the method of claim 1, as described above. Kurz also teaches further comprising: installing said printing device consumable in said printing device; and interfacing said printing device and said memory module. ***(Kurz discloses a method for providing information to a user comprising: providing a printing machine; installing a replaceable component in the printing machine, the replaceable component including a memory storage device, the memory storage device containing data including an identification code of the replaceable component; Page 1 column 9 lines1-6)***

Regarding claim 3, Muto in view of Kurz taught the method of claim 2, as described above. Kurtz also teaches further comprising uploading said email messages from said memory module to a memory of said printing device. ***(Kurz discloses a method for providing information to a user comprising: providing a printing machine; installing a replaceable component in the printing machine, the replaceable component including a memory storage device, the memory storage device containing data including an identification code of the replaceable component; Page 1 column 9 lines1-6. Kurtz further discloses the predetermined information allows the user to solve a problem with respect to the CRU during the life of the CRU. In addition, an electronic e-mail message may be sent to the user, to a User Interface (UI), or to a display window to supplement the printed document;***

Page 2 column 22 lines 13-18. Kurtz discloses the control unit of the printing machine may read the current image total from the CRUM of each CRU and, using the image run count from the memory of the printing machine, calculate a new current image total for the respective CRUM reflecting the number of images remaining on the CRU. The control unit may then write the new current image total back into the CRUM of each CRU; Page 2 paragraph 25 lines 4-11)

Regarding claim 7, Kurz in view of Muto based on the same motivation in claim 1 teaches a method for providing email messages for email alerts from a printing device (*Muto fig. 10*), (*Muto discloses the present invention has been developed to solve the above mentioned problems, and the first object of the present invention is to provide a data transfer process apparatus, a device, a network system, a data transfer method, and a storage medium capable of having the user who manages the device recognize the status of the device at an appropriate timing by transmitting by electronic mail the transmission data generated according to the message for the status information about the device based on the status change of the device and the destination information; Page 1 paragraph 10*) said method comprising: storing email messages on a memory module; attaching said memory module to a printing device consumable; installing said printing device consumable with attached memory module in a printing device; (*Kurtz discloses a method for providing information to a user comprising: providing a printing machine;*

installing a replaceable component in the printing machine, the replaceable component including a memory storage device, the memory storage device containing data including an identification code of the replaceable component; Page 1 column 9 lines 1-6. Kurtz further discloses the predetermined information allows the user to solve a problem with respect to the CRU during the life of the CRU. In addition, an electronic e-mail message may be sent to the user, to a User Interface (UI), or to a display window to supplement the printed document; Page 2 column 22 lines 13-18) and interfacing said memory module with said printing device. (Kurtz discloses a memory storage device functionally associated with the container, the memory storage device including data about the customer replaceable unit; transferring the data in the memory storage device to the printing machine; Page 2 lines 10-14)

Regarding claim 8, Muto in view of Kurz taught the method of claim 7, as described above. Kurz further teaches wherein said printing device consumable comprises a toner cartridge. *(Kurtz discloses a printing or copying machine may comprise replaceable CRU(s) such as a photoreceptor cartridge, a developer cartridge, a toner cartridge, an ink cartridge, printhead, and print cartridge each of which is generally designed to function for a preset number of images in the form of prints or copies; Page 2 Paragraph 18 lines 1-6)*

Regarding claim 9, Muto in view of Kurtz taught the method of claim 7, as described above. Kurtz also teaches further comprising uploading said email messages from said memory module to a memory unit of said printing device.

(Kurtz discloses the control unit of the printing machine may read the current image total from the CRUM of each CRU and, using the image run count from the memory of the printing machine, calculate a new current image total for the respective CRUM reflecting the number of images remaining on the CRU. The control unit may then write the new current image total back into the CRUM of each CRU; Page 2 paragraph 25 lines 4-11)

Regarding claim 10, Muto in view of Kurtz taught the method of claim 9, as described above. Muto further teaches comprising sending an email alert to one or more recipients using one of said email messages indicative of a condition of said printing device. ***(Muto fig.10, fig, 11)***

Regarding claim 11, Muto in view of Kurz taught the method of claim 10, as described above. Muto further teaches wherein said email messages comprise fields for containing printing device information. ***(Muto discloses in FIG. 10, reference numeral 1001 denotes a mail header portion, that is, a data portion containing the transmission information about electronic mail, and comprises the information indicated by 1002 to 1005; Page 5 paragraph 65 lines 5-8)***

Regarding claim 12, Muto in view of Kurz taught the method of claim 11, as described above. Muto further teaches wherein said printing device information comprises an identification of said printing device. ***(Muto discloses in FIG. 10, reference numeral 1001 denotes a mail header portion, that is, a data portion containing the transmission information about electronic mail, and comprises the information indicated by 1002 to 1005; Page 5 paragraph 65 lines 5-8)***

Regarding claim 13, Muto in view of Kurz taught the method of claim 11, as described above. Muto further teaches wherein said printing device information comprises a quantification of a remaining amount of a consumable. ***(Muto discloses FIG. 6 shows an example of the status message data showing each status of the device stored in the device control unit of the device shown in FIG. 1 according to the first embodiment of the present invention; Page 20 paragraph 20)***

Regarding claim 14, Muto in view of Kurz taught the method of claim 11, as described above. Kurz also teaches wherein said email message comprises an order for additional consumables sent to a provider of said consumables. ***(Kurz discloses For machines connected to a PC/network, at S310, an electronic e-mail message is sent to a user(s) indicating the predetermined information, for example, a message indicating low CRU life for a particular***

CRU along with information for ordering a replacement CRU including identification number and contact information including vendor(s), manufacturer(s), or third parties including their respective address, phone number, facsimile number, e-mail address, Uniform Resource Locator (URL) address, and combinations thereof; Page 3 paragraph 31 lines 1-10)

Regarding claim 15, Muto in view of Kurz the method of claim 10, as described above. Muto also teaches wherein said sending an email alert comprises: monitoring operation of said printing device for occurrence of a trigger event; inserting said printing device information into said email messages; and sending said email alert using said email messages in response to said trigger event, wherein said email messages are specific to the trigger event detected. ***(Muto discloses FIG. 10 shows an example of transmitting electronic mail when an error occurs in the device generated by the network control unit of the device shown in FIG. 7 according to the first and third embodiments of the present invention; Page 2 Paragraph 24)***

Regarding claim 16, Kurz in view of Muto taught the method of claim 15, as described above. Muto further teaches comprising receiving user input to specify a list of trigger events. ***(Muto fig. 8, & 9)***

Regarding claim 25, Kurz in view of Muto teaches the method of claim 7, as described above. Muto further teaches wherein said uploading said email

message elements to printing device memory comprises: determining if previous email message elements already exist in said printing device memory; ***(Mutu discloses the mail notification setting information obtaining unit 1108 obtains the mail notification setting information set by the client apparatus 1301 through the network interface 1114. The mail notification setting information registration unit 1109 updates the mail notification setting information stored in the mail notification setting information memory 1107 according to the mail notification setting information obtained by the mail notification setting information obtaining unit 1108. In addition, if a mail notification condition that, for example, a status notification is issued only when an error occurs is changed in the above mentioned mail notification setting information, then the device status notification condition setting unit 1110 sets a status notification condition of the device 1101 notified by the device control unit 1102; Page 6 paragraph 85)*** and uploading said email message elements to printing device memory if no previous email message elements are found. ***(Mutto discloses in the network control unit 103, the device status change detection unit 107 obtains the information (status information) about the status of the device 101 from the device control unit 102. The mail message generation unit 108 generates transmission data to be transmitted to the client apparatus 301 according to the information about the status of the device 101 obtained from the device status change detection unit 107, and the notification information (destination information). Furthermore, the mail message generation unit 108 sets the***

reply destination address of the electronic mail in the above mentioned transmission data. The reply destination address refers to the address to which an answer is transmitted in response to the electronic mail; Page 3 paragraph 41, 43)

Regarding claim 26, Muto in view of Kurz teaches the method of claim 9, wherein said uploading said email message elements to printing device memory comprises: determining if previous email messages already exist in said memory unit of said printing device; and performing a replacement action if previous email message elements are found. ***(Muto discloses in the network control unit 103, the device status change detection unit 107 obtains the information (status information) about the status of the device 101 from the device control unit 102. The mail message generation unit 108 generates transmission data to be transmitted to the client apparatus 301 according to the information about the status of the device 101 obtained from the device status change detection unit 107, and the notification information (destination information). Furthermore, the mail message generation unit 108 sets the reply destination address of the electronic mail in the above mentioned transmission data. The reply destination address refers to the address to which an answer is transmitted in response to the electronic mail; Page 3 paragraph 41, 43)***

Regarding claim 27, Kurz in view Muto taught the method of claim 26, as

described above. Muto further teaches wherein said performing a replacement action comprises replacing one or more of said previous email messages with one or more email messages from said memory module. ***(Muto discloses li step S1502, the network control unit 1103 compares the contents between the received mail notification setting information and the mail notification setting information stored in the mail notification setting information memory 1107 in the network control unit 1103. If it is determined that there is a change in the mail notification setting information, control is passed to step S1503. If it is determined that there is no change in the mail notification setting information, then the process terminates; Page 7 Paragraph 101)***

Regarding claim 28, Kurz in view of Muto further teaches the method of claim 26, as described above. Muto further teaches wherein said performing a replacement action comprises adding one or more of said email messages from said memory module to said previous email messages. ***(Muto discloses li step S1502, the network control unit 1103 compares the contents between the received mail notification setting information and the mail notification setting information stored in the mail notification setting information memory 1107 in the network control unit 1103. If it is determined that there is a change in the mail notification setting information, control is passed to step S1503. If it is determined that there is no change in the mail notification setting information, then the process terminates; Page 7 Paragraph 101)***

Regarding claim 41, Kurz in view of Muto based on the same motivation in claim 1 teaches discloses a consumable for use with a printing device, said consumable comprising: a printing device consumable; a memory module attached to said printing device consumable; ***(Kurz discloses a method for providing information to a user comprising: providing a printing machine; installing a replaceable component in the printing machine, the replaceable component including a memory storage device, the memory storage device containing data including an identification code of the replaceable component; Page 1 column 9 lines1-6 Kurz further discloses the predetermined information allows the user to solve a problem with respect to the CRU during the life of the CRU. In addition, an electronic e-mail message may be sent to the user, to a User Interface (UI), or to a display window to supplement the printed document; Page 2 column 22 lines 13-18.)*** and email messages stored on said memory module ***(Muto discloses FIG. 18 shows an example of transmitting electronic mail when a substitute status message stored in the network control unit is applied if an error occurs in the device shown in FIG. 1 according to the third embodiment of the present invention; Page 2 paragraph 32)***

Regarding claim 45, Kurz in view of Muto taught the consumable of claim 41, as described above. Kurz further comprising a wired interface for said memory module for interfacing and communicating with a printing device. ***(Kurz disclose***

to enable the CRUM to be electrically connected and disconnected with the printing machine on installation or removal of the CRU, contact pads are provided. Terminal blocks and a terminal board may be used to complete the electrical connection between the CRUM and a control unit of the printing machine; Page 2 paragraph 19 lines 4-9)

Regarding claim 46, Kurz in view of Muto taught the consumable of claim 41, as described above. Kurz also teaches further comprising an email message interface stored on said memory module which, when uploaded to a printing device, allows access and use of said email messages on said memory module. ***(Kurz discloses a method for providing information to a user comprising: providing a printing machine; installing a replaceable component in the printing machine, the replaceable component including a memory storage device, the memory storage device containing data including an identification code of the replaceable component; Page 1 column 9 lines 1-6. Kurtz further discloses the predetermined information allows the user to solve a problem with respect to the CRU during the life of the CRU. In addition, an electronic e-mail message may be sent to the user, to a User Interface (UI), or to a display window to supplement the printed document; Page 2 column 22 lines 13-18. Kurtz discloses the control unit of the printing machine may read the current image total from the CRUM of each CRU and, using the image run count from the memory of the printing machine, calculate a new current image total for the respective CRUM***

reflecting the number of images remaining on the CRU. The control unit may then write the new current image total back into the CRUM of each CRU; Page 2 paragraph 25 lines 4-11)

Regarding claim 47, Kurz in view of Muto based on the same motivation in claim 1 teaches a printing device comprising: a printing device controller with an email engine (***Muto fig. 1 element 103 & element 108***) for using email messages provided by a memory module attached to a printing device consumable; a printing device memory storing said email engine; and a printing device interface disposed and configured to interface and communicate with said memory module attached to a printing device consumable supplied to said printing device. (***Kurz discloses a method for providing information to a user comprising: providing a printing machine; installing a replaceable component in the printing machine, the replaceable component including a memory storage device, the memory storage device containing data including an identification code of the replaceable component; Page 1 column 9 lines 1-6 Kurtz further discloses the predetermined information allows the user to solve a problem with respect to the CRU during the life of the CRU. In addition, an electronic e-mail message may be sent to the user, to a User Interface (UI), or to a display window to supplement the printed document; Page 2 column 22 lines 13-18)***)

Regarding claim 51, Kurz, and Muto taught the printing device of claim 47, wherein said printing device interface comprises a wired interface. ***(Kurz disclose to enable the CRUM to be electrically connected and disconnected with the printing machine on installation or removal of the CRU, contact pads are provided. Terminal blocks and a terminal board may be used to complete the electrical connection between the CRUM and a control unit of the printing machine; Page 2 paragraph 19 lines 4-9)***

Regarding claim 52, Kurz in view of Muto teaches the printing device of claim 47, as described above. Further comprising a user interface for controlling said printing device. ***(Muto discloses in the network control unit 1103, the mail notification setting screen generation unit 1105 generates GUI (Graphical User Interface) data displayable on the GUI of the WEB browser, etc. operating in the client apparatus 1301. The GUI data generated by the mail notification setting screen generation unit 1105 is transmitted to the client apparatus 1301 through the network interface 1114, thereby providing a GUI for setting mail notification as shown in FIG. 13 in the client apparatus 1301. The WEB browser of the client apparatus 1301 interprets the received GUI data, and displays a screen as shown in FIG. 13. Thus, the user can set mail notification without an application program exclusively used to set mail notification; Column 6 paragraph 82)***

Regarding claim 53, Kurz in view of Muto teaches the printing device of claim 47,

as described above. Muto wherein said controller is further configured to upload an email message interface from said memory module and execute said email message interface to access email messages stored on said memory module.

(Muto discloses in the network control unit 1103, the mail notification setting screen generation unit 1105 generates GUI (Graphical User Interface) data displayable on the GUI of the WEB browser, etc. operating in the client apparatus 1301. The GUI data generated by the mail notification setting screen generation unit 1105 is transmitted to the client apparatus 1301 through the network interface 1114, thereby providing a GUI for setting mail notification as shown in FIG. 13 in the client apparatus 1301. The WEB browser of the client apparatus 1301 interprets the received GUI data, and displays a screen as shown in FIG. 13. Thus, the user can set mail notification without an application program exclusively used to set mail notification; Column 6 paragraph 82. Mutto further discloses the mail notification setting screen memory 1106 stores screen information required for the GUI data generated by the mail notification setting screen generation unit 1105. The mail notification setting information memory 1107 stores the currently set mail notification setting information (transmission setting information) such as, for example, the destination of electronic mail, a notification condition, etc., and the information is referred to when GUI data is generated by the mail notification setting screen generation unit 1105; Page 6 paragraph 83)

4. Claim 29 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kurz and Muto in view of Narushima (US Patent 6831755).

Regarding claim 29, Kurz in view of Muto teaches the method of claim 26, as described above. Kurz and Muto do not teach wherein said performing a replacement action requires an administration setting, password, or other form of authentication.

However Narushima teaches wherein said performing a replacement action requires an administration setting, password, or other form of authentication.

(Narushima discloses a step of checking the password before updating/rewriting software program column 17 lines 12-25)

Treptow, Kurz, and Narushima are from the same field of endeavor, Printing/Toner cartridge systems.

It would be obvious to a person of ordinary skill in the art at the time of the invention to modify Kurtz and Muto's replaceable. One of ordinary skill in the art would have been motivated to make this modification in order to have authorized personnel making the updates.

Therefore, it would be obvious to combine Kurtz, Muto, and Narushima to arrive to the limitations of claim 29.

5. Claim 42 rejected under 35 U.S.C. 103(a) as being unpatentable over Kurz in view of Hatasa (US 2003/0214546).

Regarding claim 42, Kurz taught the consumable of claim 41, as described above. Hatasa teaches further comprising a wireless interface for said memory module for interfacing and communicating with a printing device.

Although Kurz teaches claim 41, Kurz does not teach comprising a wireless interface for said memory module for interfacing and communicating with a printing device.

However Hatasa teaches comprising a wireless interface for said memory module for interfacing and communicating with a printing device. ***(Hatasa discloses referring to FIG. 8, in the bottom portion of the internal space of the printer main assembly 201, there is disposed a secondary scan mechanism (unshown) comprising a feed roller 204, a driving motor 205, etc. A sheet of printing paper P is conveyed frontward so that it opposes the ink jet head 203 from underneath; Page 4 Paragraph 64. Hatasa also discloses further, in the top portion of the internal space of the printer main assembly 210, there is disposed a single communication unit 206, as both a power supplying means and a wireless communicating means. Not only does this communication unit 206 electromagnetically induce electric current in the corresponding induction coil 138 of the ink cartridge 100, but also it wirelessly exchanges predetermined types of information with the first portion 132 of the radio antenna 131 of the ink cartridge 100. However, there a four ink cartridges 100 different in type, which are moved in the direction in which they are aligned as described above. Therefore, the single communication unit 206 wirelessly communicates with each of the***

four ink cartridges 100 as each ink cartridge 100 is moved into the area in which the communication unit 206 falls into communication range RS of each ink cartridge 100, as shown in FIG. 9.; Page 4 paragraph 64)

Both Kurtz and Hatasa are from the same field of endeavor, Printing/Toner cartridge systems.

It would be obvious to a person of ordinary skill in the art at the time of the invention to modify the Kurtz replaceable consumable printing device to include the wireless interface of Hatasa. One of ordinary skill in the art would have been motivated to make this modification in order to eliminate the fear that the data communication between the printer main assembly 201 and the ink container 100 might be unsatisfactory due to the electrical contact errors between them traceable to the ink 104; Hatasa Page 5 Paragraph 84.

Therefore, it would be obvious to combine Kurtz and Hatasa to arrive to the limitations of claim 42.

6. Claims 43 & 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kurz and Hatasa (US 2003/0214546) in view of Richards (US Patent 6532351).

Regarding claim 43, Kurz in view of Hatasa taught the consumable of claim 42, as described above. Kurz and Hatasa do not teach wherein said wireless interface comprises a radio frequency interface.

However, Richards teaches wherein said wireless interface comprises a radio frequency interface. **(Richards discloses the method of communicating with other printer component via wireless communication means, such as by infrared or RF; Column 5 lines 10-32)**

Richards is from the same field of endeavor, Printing/ Toner cartridge systems. It would be obvious to a person of ordinary skill in the art at the time of the invention to modify Kurtz and Hatasa's wireless consumable interface to include an infrared wireless communication interface of Richard. One of ordinary skill in the art would have been motivated to make this modification in order to a verity of different Wireless interfaces which are well known.

Therefore, it would be obvious to combine Kurz, Hatasa and Richards to arrive to the limitations of claim 43.

Regarding claim 44, Kurz in view of Hatasa taught the consumable of claim 42, as described above. Richards teaches wherein said wireless interface comprises an infrared interface.

(Richards discloses the method of communicating with other printer component via wireless communication means, such as by infrared or RF; Column 5 lines 10-32)

7. Claim 48 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kurtz and Muto in view of Hatasa (US 2003/0214546).

Regarding claim 48, Kurtz in view of Muto taught the printing device of claim 47, as described above. Further comprising a wireless interface for said memory module for interfacing and communicating with a printing device.

Although Kurz and Muto taught claim 41, they do not teach comprising a wireless interface for said memory module for interfacing and communicating with a printing device.

However Hatasa teaches comprising a wireless interface for said memory module for interfacing and communicating with a printing device. ***(Hatasa discloses referring to FIG. 8, in the bottom portion of the internal space of the printer main assembly 201, there is disposed a secondary scan mechanism (unshown) comprising a feed roller 204, a driving motor 205, etc. A sheet of printing paper P is conveyed frontward so that it opposes the ink jet head 203 from underneath; Page 4 paragraph 64. Hatasa also discloses further, in the top portion of the internal space of the printer main assembly 210, there is disposed a single communication unit 206, as both a power supplying means and a wireless communicating means. Not only does this communication unit 206 electromagnetically induce electric current in the corresponding induction coil 138 of the ink cartridge 100, but also it wirelessly exchanges predetermined types of information with the first portion 132 of the radio antenna 131 of the ink cartridge 100. However, there a four ink cartridges 100 different in type, which are moved in the direction in which they are aligned as described above. Therefore, the single communication unit 206 wirelessly communicates with each of the***

four ink cartridges 100 as each ink cartridge 100 is moved into the area in which the communication unit 206 falls into communication range RS of each ink cartridge 100, as shown in FIG. 9.; Page 4 paragraph 64)

Kurtz, Muto and Hatasa are from the same field of endeavor, Printing/ Toner cartridge systems.

It would be obvious to a person of ordinary skill in the art at the time of the invention to modify Kurtz and Muto's email notification consumable printing device to include the wireless interface of Hatasa. One of ordinary skill in the art would have been motivated to make this modification in order to eliminate the fear that the data communication between the printer main assembly 201 and the ink container 100 might be unsatisfactory due to the electrical contact errors between them traceable to the ink 104; Hatasa Page 5 Paragraph 84.

Therefore, it would be obvious to combine Kurz, Mutto and Hatasa to arrive to the limitations of claim 48.

8. Regarding Claims 49 & 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kurz, Muto, Hatasa and in view of Richards.

Regarding claim 49, Kurz, Muto, and Hatas taught the printing device of claim 48, as described above. They do not teach wherein said wireless interface comprises a radio frequency interface.

However, Richards teaches wherein said wireless interface comprises a radio frequency interface. **(Richards discloses the method of communicating with**

other printer component via wireless communication means, such as by infrared or RF; Column 5 lines 10-32)

Richards is from the same field of endeavor, Printing/ Toner cartridge systems. It would be obvious to a person of ordinary skill in the art at the time of the invention to modify Kurz, Muto, and Hatasa's wireless consumable interface to include an infrared wireless communication interface Richards. One of ordinary skill in the art would have been motivated to make this modification in order to a verity of different Wireless interfaces which are well known.

Therefore, it would be obvious to combine Kurz, Muto, Hatasa and Richards to arrive to the limitations of claim 49.

Regarding claim 50, Kurz, Muto, and Hatasa teaches the printing device of claim 48, as described above. Richards further teaches wherein said wireless interface comprises an infrared interface. **(Richards discloses the method of communicating with other printer component via wireless communication means, such as by infrared or RF; Column 5 lines 10-32)**

9. The following prior art made of record and not relied upon is cited to establish the level of skill in the applicant's art and those arts considered reasonably pertinent to applicant's disclosure. See MPEP 707.05 ©.

The examiner requests, in response to this Office action, support be shown for language added to any original claims on amendment and any new claim. That is indicated support for newly added claim language by specifically pointing to page(s) and line no(s) in the specification and/or drawing figure(s). This will assist the examiner in prosecuting the application.

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gerald Smarth whose telephone number is (571)270-1923. The examiner can normally be reached on Monday-Friday(7:30am-5:00pm)est.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeff Pwu can be reached on (571)272-6798. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
